SRS GEOGRAPHIC CODE
SECTION G-1B

INTRODUCTION

As the amount of agricultural data punched into cards or recorded on other machine media increases, the established of uniform coding systems becomes increasingly important. This geographic code system, approved for use in the Agency and conforming to Federal Information Processing Standards (FIPS), is one of the systems designed to meet such needs.

At the present time, there are two operational phases in which geographic code systems of one kind or another are used by the Agency, (1) Washington, D.C. and State Statistical Office programs for gathering data or distributing reports. Recognizing the problems unique to some of the State Statistical Office operations, this system accommodates the diverse needs of the Agency within the framework of a standard code system which uses the minimum amount of space compatible with these needs.

The system contains codes for States adopted by the Agency in 1965, as well as Federal Information Processing Standards (FIPS) codes for geographic areas. In addition, the system includes codes developed specifically to meet the unique needs of the Agency.

The system is limited to the identification of specific geographic locations, e.g., State, crop reporting district, county, city. It is not designed to indicate simultaneously and auxiliary data which may be related to these locations, such as land use or type of farming operation. The system, therefore, is not intended to supersede auxiliary coding schemes such as those now used for June Enumerative Survey data on cultivated land, range land, large farm operations, urban farm operations, etc., nor any other auxiliary coding scheme applicable to information above and beyond geographic location.

Implementation of this system shall be in accordance with CEM.

Comments regarding the system should be directed to the Director, Survey Division, Statistical Reporting Service, Department of Agricultural, Washington, D.C. 20250.

UNITED STATES DEPARTMENT OF AGRICULTURE
STATISTICAL REPORTING SERVICE
WASHINGTON, D.C. 20250

FOR OFFICIAL USE ONLY
CEM 1736
November 22, 1974

SUBJECT: Standards for Geographic Code System

FOR ACTION BY: All State Statistical Offices and Washington
Divisions

SEND RESPONSE TO: None Required

DUE DATE: None

REFERENCE: CEM 1735; Supersedes CEM 1710

Approved by Bruce M. Graham
Deputy Administrator

EFFECTIVE UNTIL: Indefinite

-
1. GENERAL: This CEM updates standards for the SRS Geographic Code System. The System was established in 1965 for use by the Agency in processing data, in handling mailing lists, and in other areas where the use of such codes is efficient or essential. In 1969, CEM 1710 incorporated Federal Information Processing Standards (FIPS) geographic codes as Agency standards. In 1974, CEM 1735 refined policy for publication of State and regional data.
 2. DESCRIPTION OF THE SRS GEOGRAPHIC CODE SYSTEM:
 - A. State Codes: The Agency standard is the two-digit FIPS code, which arrays States in alphabetic sequence. The source document is FIPS Register Publication 5. As described in paragraph B, these codes may be augmented to serve SRS needs.
 - B. Region Codes: OMB Circular Number A-46 sharply curtailed publishing regional data other than for the ten Standard Federal Regions. Agency policy, as defined in CEM 1735, is to publish regional data only in special cases that can be justified. Therefore, standards for region codes and for four-digit region-State codes are discontinued.

State FIPS codes are documented in Section 2 of the SRS Geographic Codes manual. This Section also lists extensions to those codes for SRS use. These codes will be used (usually sequentially) as needed to identify data published on a regional basis. Because their use will be unique (by commodity, by survey, etc.), users must completely define the regions identified.

Caution: Some of the extensions to FIPS State codes conflict with FIPS codes for outlying areas of the U.S. Non-SRS data users should be advised accordingly.

- C. Crop Reporting District Codes: The SRS system of two-digit codes for identifying Crop Reporting Districts is unchanged.
 - D. Sub-State Codes: This SRS system of two-digit codes identifies special areas within States. These codes are compatible with Crop Reporting District codes; in specialized applications, they may be used in lieu of Crop Reporting District codes.
 - E. County Codes: The Agency standard is the three-digit FIPS code, which sequences counties alphabetically within a State. The source document is FIPS Register Publication 6.
 - F. Standard Metropolitan Statistical Area (SMSA) Codes: These four-digit codes identify integrated economic and social units which have a recognized large population nucleus. The codes arrange the areas in alphabetic sequence by SMSA name. The source document is FIPS Register Publication 8.
 - G. Place (City) Name Codes: No SRS standards at this time. SRS standards will conform to Federal Information Processing Standards, when issued.
3. IMPLEMENTATION: Standards not already implemented shall become effective January 1, 1975. Revised sections of the Geographic Code System and instructions will be transmitted and issued in Operations Memoranda.

SECTION G-7

CODES FOR SUB-STATE AREAS

I General:

Some data are summarized or estimated on the basis of areas within States other than counties or Crop Reporting Districts (CRD's). The definition of these areas satisfies special administrative or commodity-oriented needs for the State.

Usually these areas are defined along county lines, but may be within (but not include all of) a CRD, may cross CRD lines, or may combine parts and/or all of more than one CRD.

Sub-State codes are used to identify data for these special areas. Sub-State codes should be used as suffixes (modifiers) of State FIPS codes.

II Assignment of Codes

- A. A sub-State code of 99 identifies a State total (i.e. "all" sub-State areas). This code may identify data which is the total of associated data identified with sub-State codes 01 through 98 or to identify state-level data for which sub-State data is not available or not specified.
- B. Code 98 identifies "other areas" within a State. It is the only code used for this, regardless of how many times its use is required within a State.

For example, if four sub-State areas were defined;

Commodity A: East
 Other than East

Commodity B: Mountains
 Other than Mountains

SRS GEOGRAPHIC CODE
SECTION G-7

B. (Continued)

The following codes might be assigned:

<u>Substate area</u>	<u>Codes for commodity:</u>	
	<u>A</u>	<u>B</u>
East	01	
Mountains		02
Other areas	98	98

- C. Each sub-State area has a unique code.
A sub-State area used for more than one commodity will be identified by the same code in each use.
- D. In most cases, ascending code values correspond to the sequence in which data are organized or published.
- E. Codes were assigned to be compatible with (Crop Reporting District and other) sub-State codes already in use.
- F. In most cases, a sub-State area which is a county (only) was assigned a sub-State code equal to the second and third digits of the three-digit FIPS code for that county.
- G. Codes generally have a North/West to South/East progression within each State.

III Specific sub-State codes

Note: Crop Reporting Districts are shown to illustrate the compatibility and progression of codes.
